Creating a Culture of Safety: APLU recommendations and tools for universities and colleges

Erik Talley
Memorial Sloan Kettering Cancer Center

Kimberly Begley Jeskie, MPH-OSHM
Facilities and Operations Directorate
Oak Ridge National Laboratory

Presented at:
251st American Chemical Society
National Meeting and Exposition
San Diego, CA

March 15, 2016
What or who is APLU?

• Association of Public and Land-grant Universities
• Founded in 1887, North America’s oldest higher education association
• Research, policy, and advocacy organization dedicated to strengthening and advancing the work of public universities in the U.S., Canada, and Mexico
A call to arms…

APLU Lab Safety Task Force

• Since 2013, APLU Council on Research (CoR) has sought to proactively address the lab accident epidemic on campuses.
• Sense that academic leaders must be proactive change agents
• Concerns about risk management, federal agency action, faculty workload burden
• Formal Task Force established in 2015, involving APLU, AAU, COGR, ACS
Task Force Members

- Taylor Eighmy (Co-Chair), University of Tennessee, Knoxville
- Mark McLellan (Co-chair), Utah State University
- Gene Block (Honorary Chair), UCLA
- Kimberly Espy, University of Arizona
- Mridul Gautam, University of Nevada, Reno
- Kimberly Jeskie, Oak Ridge National Laboratory
- Dawn Mason, Eastman Chemical Company
- Jan Novakofski, University of Illinois at Urbana-Champaign
Task Force Members (continued)

- Patty Olinger, Emory University
- Joanne Polzien, Michigan Technological University
- Lesley Rigg, University of Calgary
- Ara Tahmassian, Harvard University
- Erik Talley, Cornell University
- William Tolman, University of Minnesota Twin Cities
- Nancy Wayne, University of California Los Angeles
- Alice Young, Texas Tech University
Task Force Staff

- Steve Bilbao, Utah State University
- Robert Nobles, University of Tennessee, Knoxville
- Kacy Redd, APLU
Gene Block, Chancellor, UCLA (honorary chair, Task Force on Laboratory Safety)

“Laboratory safety is an issue that is personally important to me. Many of you are aware of the laboratory accident at UCLA in 2008 that resulted in the tragic death of Sheri Sangji, a young lab assistant. As challenging as that incident has been for our community, I believe we have a very clear path as a great public research university to learn from it and to lead the effort at UCLA – as well as nationally – to improve our campus laboratory safety cultures. We must seize this opportunity to individually and collectively renew our commitment to strengthening safety on our campuses...I hope you will join me in this critical effort.”
The Task Force on Laboratory Safety calls on all universities to embrace a renewed commitment to improve the safety culture for all academic research, scholarship, and teaching. We ask that college and university presidents publicize their commitment and expectations within their institutions. We ask that all academic institutions look beyond the traditional research laboratory to embrace a commitment to improving safety in research and teaching laboratories; in shops, studios, and stages; in teaching classrooms, and in the field.

The Task Force further recommends that the Association of Public and Land-grant Universities and the Association of American Universities, as the member associations of research universities, call upon all academic institutions to renew their commitment to improve the safety culture for all academic research, scholarship, and teaching. We call upon APLU and its Council on Research (CoR) to routinely recognize exemplary programs and to sponsor an annual safety culture award.
What We Did

• Actively reached out across the university and science communities to hear from over 20 organizations and 25 institutions;
• Synthesized recommendations from the National Academies, ACS, and the U.S. Chemical Safety and Hazard Investigation Board (CSB) into 20 actionable recommendations;
• Developed a national implementation strategy with recommendations and a tool box
Listening and Presenting Sessions

- May 6: NRC, ACS, CSHEMA, UCB, CDC, AAHRPP, ABSA,
- June 8: AAALAC
- June 15: COGR, FASEB, FDP, AAU
- June 18: NIH
- June 31: CoR Summer Meeting
- August 3: URIMA
- August 5 & 14: NACUA
- August 14: NACUBO
- August 17: ACS Chemical Safety Committee Meeting
- September 3: FDP Faculty Lunch Forum
- September 9: CSHEMA regional meeting
- September 22: CUR
- September 28: NPA
- October 14: ABSA annual conference
- October 22: COGR meeting
- November 4: CCAS meeting
- November 11: NACUA CLE conference
- November 15: APLU Annual Meeting
Implementation Guide

• Includes 20 recommendations for creating a culture of academic and research safety drawn from:
  – National Academies’ *Safe Science: Promoting a Culture of Safety in Academic Chemical Research*;
  – the American Chemical Society’s *Creating Safety Cultures in Academic Institutions*;
  – OSHA’s *Safety and Health Management Systems e-Tool*; and
  – the US Chemical Safety and Hazard Investigation Board’s case study on *Texas Tech University: Laboratory Explosion*.

• Tools and resources for implementation
  – Core institutional values that are foundational to a culture of safety
  – Suggested roles and responsibilities
  – Resources for implementing each of the 20 recommendations
Suggested Core Institutional Values

• Safety is everyone’s responsibility. Each institution should commit to a campus environment that ensures the health and safety of their entire community (faculty, students, staff, and visitors) and empowers the community to be responsible for the safety of others. A safe campus environment for workers is a right of employment. A safe campus learning environment is a right of education.

• Good science is safe science. Scholarly excellence and responsible conduct of research includes safety as a critical component.
Suggested Core Institutional Values

• Safety training and safety education is a critical component of research and education. It is important for instilling a culture of safety in the next generation of researchers and future faculty, and it is important for our student's career development and employability.

• An improved safety culture is necessary to implement true risk reduction.

• It is best to recognize that diversity and flexibility of approaches and methods will be used by each institution to develop a strong safety culture unique to their situation.
1. The president/chancellor renews commitment to improve the culture of safety for all academic research, scholarship, and teaching.

KEY RESOURCES

Safe Science: Promoting a Culture of Safety in Academic Chemical Research (NRC, 2014):
Recommendation 1. The president and other institutional leaders must actively demonstrate that safety is a core value of the institution and show an ongoing commitment to it.

Creating Safety Cultures in Academic Institutions (ACS, 2012):
Recommendation 2. Encourage every leader to become a proponent of safety and safety education, and to demonstrate this care for safety in their actions with other staff members and students.

Creating a Safety Culture (OSHA, 1989):
Obtain Top Management “Buy-in.” This is the very first step that needs to be accomplished. Top managers must be on board. If they are not, safety and health will compete against core business issues such as production and profitability, a battle that will almost always be lost. They need to understand the need for change and be willing to support it. Shoving the costs of the organization in terms of dollars (direct and indirect costs of incidents) that are being lost, and the organizational costs (fear, lack of trust, feeling of being used, etc.) can be compelling reasons for looking at needing to do something different. Because losses due to incidents are bottom line costs to the organization, controlling these will more than pay for the needed changes. In addition, when successful, you will also go a long way in eliminating organizational barriers such as fear, lack of trust, etc.: issues that typically get in the way of everything that the organization wants to do.

TOOLBOX

Actions for the president/chancellor that help strengthen a culture of safety

- Responsibility for fostering and sustaining a safe campus rests on all members of the university.
2. The president/chancellor designates a campus-lead and leadership team to begin the process. The president/chancellor considers appropriate committees to help implement a culture of safety, including a safety committee of faculty, Environmental Health and Safety (EH&S) officers, and other representatives that can provide formative feedback to researchers, educators, and staff.

**KEY RESOURCES**

*Creating Safety Cultures in Academic Institutions (ACS, 2012)*

Recommendation 13. Establish a series of safety councils and safety committees from the highest level of management to the departmental level or lower. Each of these committees reports, in turn, to a committee that is higher in the hierarchy of the institution.

*Creating a Safety Culture (OSHA, 1989):*

Establish a Steering Committee comprised of management, employees, union (if one
A Tool Box

• Path and rate of change around cultural adoption is unique to each institution. One size does not fit all.
• Each institutions can best select the tools that best work for them.
• Tools in the Tool Box are expected to evolve.
• The most useful Tools will focus on cultural change rather than compliance.
• Accreditation is not a component of the Tool Box.
Tool Sets to support ...

• Institution-wide dynamics and resources
• Data, hazard identification, & hazard analysis
• Training, learning, & application
• Continuous improvement
• Access to key resources
• Tools drawn from
  – Peer academic institutions
  – Industrial partners
  – National labs
• Draft toolbox can be accessed here:

http://ittybittyurl.com/XyC

Proposed Remaining Schedule

- Letter and report from APLU, AAU, Chancellor Block to presidents and chancellors of APLU and AAU institutions in Spring 2016.
Thank you to the following organizations and institutions

Organizations
APLU’s Council on Research (CoR); Association of American Universities (AAU); American Chemical Society (ACS); Council On Governmental Relations (COGR); Council of Graduate Schools (CGS); National Academies of Sciences, Engineering, and Medicine (NASEM); U.S. Chemical Safety and Hazard Investigation Board (UCB); Oak Ridge National Lab; Eastman Chemical Co; Centers for Disease Control and Prevention (CDC); American Biological Safety Association (ABSA); Association for the Accreditation of Human Research Protection Programs (AAHRPP); Campus Safety, Health, and Environmental Management Association (CSHEMA); Association for Assessment and Accreditation of Laboratory Animal Care International (AAALAC); Federation of American Societies for Experimental Biology (FASEB); Federal Demonstration Partnership (FDP); University Risk Management and Insurance Association (URMIA); National Association of College and University Attorneys (NACUA); National Association of College and University Business Officers (NACUBO); National Postdoctoral Association (NPA); Council on Undergraduate Research (CUR); and Council of Colleges of Arts and Sciences (CCAS).

Institutions
Duke University, University of South Florida (FDP), University of Pittsburgh, University of California, University of Nebraska Lincoln, The University of Utah, The University of Texas Health Science, Auburn University, University of Notre Dame, University of Arizona, Texas A&M University System, University of Maryland, University of Tennessee, Knoxville, Utah State University, University of California Los Angeles, University of Arizona, University of Nevada, Reno, University of Illinois at Urbana-Champaign, Emory University, Michigan Technological University, University of Calgary, Harvard University, Cornell University, University of Minnesota Twin Cities, and Texas Tech University
We Welcome Your Thoughts and Input

• Where are you today in your culture of safety?
• Do you have best practices/recommendations to share with us?
• Are you willing to join us in strengthening the safety culture on your campus?

Taylor Eighmy at teighmy@utk.edu
Mark McLellan at Mark.McLellan@usu.edu
Kacy Redd at kredd@aplu.org
Draft Recommendations

1. The President/Chancellor renews commitment to improve the safety culture for all academic research, scholarship, and teaching.

2. The President/Chancellor designates a campus-lead and leadership team to begin the process. Consider appropriate committees to help implement a culture of safety, including a safety committee of faculty, Environmental Health and Safety (EH&S) officers, and other representatives that can provide formative feedback to researchers, educators, and staff.

3. The campus-lead and leadership team conduct campus dialogues with stakeholders to develop a shared vision of safety that aligns with the institutional mission and to develop an action plan.

4. The campus-lead and leadership team develop effective safety policies, procedures, and management system, and identifies the resources necessary for implementation. They establish a recognition and reward system and integrate these into tenure and promotion, hiring, and annual performance reviews.

5. The institution develops a risk assessment process for laboratory safety that is integral to all activities conducted in laboratory or field operations. There are appropriate resources to assist the faculty with risk assessment.

6. The campus-lead and leadership team clearly articulate the roles and responsibilities of all stakeholders.

7. The institution establishes a unified administrative reporting model that connects responsibility for developing and implementing academic safety policies under one administrative pillar in the institution, and that includes faculty, EH&S officers, and administrative leaders.

8. The campus-lead, leadership team, and faculty embed safety communication in laboratories, classes, departments and in the wider campus.

9. The campus-lead, leadership team, and faculty work to create a trusting and safe culture. They encourage open dialogue and celebrate reporting and learning from near misses.
Draft Recommendations

10. The institution empowers undergraduate students, graduate students, post docs, and staff to voice safety questions and concerns to their faculty supervisors, offices of EH&S, and/or safety committee.

11. The institution works to strengthen collegial and collaborative relationships between faculty and the staff in the offices of EH&S.

12. The institution works to enhance effective working relationships with first responders.

13. The institution implements routine hazard analyses, including them as integral components of undergraduate and graduate education; thesis, dissertation, and funding proposals; and experimental design for all experiments.

14. The institution implements a process to report incidents and near misses so that the campus community can learn from these incidents.

15. The institution provides laboratory safety training for students, faculty, EH&S staff, and department heads.

16. The institution ensures undergraduate and graduate science & engineering curricula include an emphasis on safe practices.

17. The institution conducts self-assessment and benchmarking using measures that can provide feedback on whether they are moving to a safer culture.

18. The institution develops a continuous improvement system that provides feedback, reassessment, and ongoing training and learning opportunities.

19. The institution develops a system of accountability including peer to peer accountability.

20. The institution promotes academic and industrial/government partnerships that allow academic researchers to learn from strong and well-developed safety cultures in industrial and government laboratories.
