

Laboratory Safety – Beyond the Fundamentals

Presenter: Jim Kaufman

Description:

The Laboratory Safety Institute will present a new course at the ACS national meetings which is designed to meet the needs of scientists and science educators wanting to learn more about laboratory safety. “Lab Safety – Beyond the Fundamentals” continues where LSI’s introductory course (The Laboratory Safety Workshop) leaves off and explores new areas in lab safety. There is an emphasis on simple and inexpensive steps to create more effective lab safety programs and grow the culture of lab safety.

There is extensive opportunity for questions both during the workshop with follow-up by phone and email. This includes a one-hour conference call to help with the implementation of course concepts.

Course participants are encouraged to submit in advance five questions/topics they wish to be sure are covered in the course: jim@labsafetyinstitute.org

Agenda:

8:00	Registration Introduction Evaluating your Lab Safety Program Fire Control Lab Safety Equipment
10:00	BREAK Labeling Chemical Handling (part II) Compressed Gases
12:00	LUNCH BREAK (Dutch treat)
1:15	Laboratory Ventilation Recordkeeping Handling Lab Glassware BREAK Conducting Laboratory Inspections Employee/Student Involvement Safety Program Planning Safety Information Resources
4:15	Questions And Answers
4:30	LAB SAFETY FORUM -Informal Roundtable Discussions for Interested Participants
